

A Sample Final Project at PGS: Custom 1911

Your education at PGS will culminate in the planning, design and building of two projects. One option is a custom 1911. Here a recent student purchased all of the necessary parts, including oversize Caspian frame and slide. He fit every part by hand to the tightest tolerances possible to achieve match grade accuracy. After test firing at a local range, it was on to the cosmetics. The grip frame features hand cut checkering at 30 lines per inch, time consuming but worth every minute. He also hand crafted Cocobolo grips, then blued and polished it to a fine finish. An indication of what you will be trained to do during your 16 months at PGS!
